
Coins on the chessboard (R)

X72571_en

Consider a chess board with r rows and c columns, where every square contains a number of coins ranging from 0 up to 9. We number the rows from 1 to r starting from the top row. Write a program such that, given a chess board, computes the total number of coins it contains and the number of coins placed in odd rows.

Exam score: 5.000000 **Automatic part:** 40.000000%

Input

Input begins with two integers greater than zero that represent the number of rows r and columns c of the board, respectively. Then, it follows r lines, each one with c characters ranging from '0' to '9'.

Output

The total number of coins on the board and the number of coins placed in odd rows.

Sample input 1

```
3 4
2735
0479
1508
```

Sample output 1

```
51 31
```

Sample input 2

```
1 20
01234567890123456789
```

Sample output 2

```
90 90
```

Sample input 3

```
2 1
4
5
```

Sample output 3

```
9 4
```
